ABOUT

ISEC7 MAIL enables access to Microsoft Exchange and Office 365 environments with secure Personal Information Management (PIM) data such as contacts, calendar, and notes. ISEC7 MAIL also allows for mailbox delegation capabilities and public folder integration. ISEC7 MAIL operates with modern and certificate-based authentication (CBA) and allows users to securely send, receive, and enforce encrypted and signed emails (S/MIME). As the top priorities of ISEC7 MAIL are security, classification, and authentication, it is an ideal tool for managing classified or sensitive information, organizational or group mailboxes, and supporting executive leadership and their staff.

DELEGATED MOBILE ACCESS TO MICROSOFT EXCHANGE

Easily managed from a mobile device, ISEC7 MAIL enables mobile access to Microsoft Exchange accounts with the ability to delegate access for approved staff. Delegation gives authorized users read and write access to email, calendar, public folders and more. No complex technical skills are required, simply add delegates from the Outlook client.

ISEC7 CLASSIFY is part of ISEC7 MAIL and is designed to prevent users from mistakenly or maliciously incorrectly classifying their communications. And with ISEC7 CLASSIFY incorporated into ISEC7 MAIL, users can ensure they adhere to the same classification hygiene on their mobile devices as on their desktops.

EMPOWER EXECUTIVES AND STAFF

ISEC7 MAIL supports temporary delegation during a vacation or sick leave, allowing a colleague to cover for the person who is absent. Executives can delegate access to email and calendar to their assistants. In addition, multiple staff members can be granted access to a company or shared organizational account. With access to a delegated account, the user can book or change calendar appointments with ISEC7 MAIL's Smart Scheduler, access emails, and access content in the public folders–directly from any mobile device.

EASY SET UP AND CONFIGURATION

ISEC7 MAIL is an app that requires no extra middleware. So, access is easily configured using the Delegate wizard in Outlook and can easily be deployed via any UEM application configuration. No password(s) are shared, and authorized delegates staff have access to the account immediately. Selected mailboxes and folders are automatically synchronized and available offline. The application supports several third-party secure container solutions, including BlackBerry Dynamics, Citrix Mobile Endpoint Management, Microsoft Intune, MobileIron AppConnect, VMWare Workspace ONE, Android Enterprise, and Samsung Knox. Additionally, ISEC7's proprietary management and monitoring solution ISEC7 SPHERE is integrated with ISEC7 MAIL and provides classification statistics and monitoring for compliance.

ISEC7 Government Services is the professional & managed services branch of ISEC7 INC in Baltimore, Maryland, and part of ISEC7 Group, supporting the United States Federal Government and Department of Defense and a serving as a leading provider of mission critical digital workplace solutions for both unclassified and classified use.

Our professionals specialize in designing and supporting environments focused on enabling secure and productive end user computing. We emphasize usability while also maintaining a strong security posture around key Zero Trust principles and implementing continuous monitoring capabilities to meet NSA requirements for CSfC environments. 100% of the ISEC7 Government Services workforce holds government security clearance.

Whether your organization needs communications for field/remote workers, classified air-gapped mobile communications, or simply wants to enable an anywhere workplace for employees, we provide the services and tools to enable those capabilities.
